

Technical Support

The Alpine system is designed with a sophisticated interlocking system that does not allow you to view video or make any system adjustment while the vehicle is in motion. The system requires the connection of the parking brake(Yellow/Blue). The parking brake (Yellow/Blue) wire must be connected to the vehicles wire that pulses negative when the parking brake is applied. Once these wires are connected, follow the instructions below to access the advance menu settings.

- 1. Engage the parking brake.
- 2. Disengage the parking brake.

Driving Mobile Multimedia Innovation

3. Engage the parking brake.
